

Installation Guide

This page provides a general introduction to the installation of the Ozeki NG - SMS Gateway software, as well as links to pages containing installation details. This guide is primarily intended for IT professionals familiar with Windows operating systems.

The Ozeki NG - SMS Gateway software enables you to use your computer to send and receive SMS messages to and from mobile devices. It allows SMS messaging in two ways: directly connecting to the SMS Center of a GSM service provider over the Internet or connecting to it using a GSM modem attached to the PC with a phone to-PC data cable.

Direct connection to the SMS Center has several advantages, including a greater speed and reliability. Note, however, that it requires you to set up an IP SMS account with one or more GSM service providers.

For SMS messaging with a GSM modem, you need to use a suitable GSM device. For more information, check out the following page: [Supported Phones](#)

To run the Ozeki NG - SMS Gateway software, your computer needs to meet certain hardware and software requirements. For details about them, check out the [Prerequisites](#) page.

To obtain the software, you can simply download it from the website dedicated to the product. To find out more about the download of the software and some other programs required for the use of Ozeki NG, check out the [Download Information](#) page.

When you have downloaded the software, you will need to install it. This simple process is clearly explained on the [Installation Steps](#) page.
