OZEKI Phone System

4 MUST HAVE SERVICES FOR CORPORATE PHONE SYSTEMS IN THE FUTURE

1. Use your smartphones as mobile extensions

Employees of the future will be equipped with multiple communication devices. They will use devices in accordance with their location, availability and their role in the organization. To reach such employees in an appropriate way, it is vital to have a phone system that is ready to manage all the information available and to take into consideration all the communication options, before initiating contact.

Ozeki Phone System is designed to handle the mobile phones, the desktop phones, the PC and the tablet of a user, to offer the best possible communication experience.

Ozeki Phone System Smartphone clients offer great advantages:

- They work in all mobile networks (even if traditional VoIP is blocked)
- They use an encrypted communication channel to offer end to end security
- They can be managed in synch with desktop phones and PC clients

unlimited communication • flexibility • security

Supported operation systems:   

Mobile: calls through mobile internet with end to end encryption

2. A telephone on your website

Website visitors often find it hard to pick up their phone to dial a number when they browse a webpage. Most laptops, tablets, smartphones and pc-s have built in microphone, headset and camera. Wouldn't it be easier to let them make a call simply by pressing a button in the webpage? Wouldn't it be great to accept this call the same way you can accept a regular telephone call in your office?

Ozeki Phone System offers this technology out of the box.

- Embedded telephone on the website (voice and video calls)
- Click to call
- Live chat
- Web conferencing

calls through the internet

Webphone: voice call, video call, live chat on a webpage

way to contact you

3. Advanced messaging, location, presence service

Each call and message in your business should be handled according to its relevance, importance, and urgency with appropriate action. Your future telephone system must take into account, presence, location, availability and select the best method for contact when communication takes place.

Ozeki Phone System's advanced messaging, location and presence technology, makes it possible to select the best action when an event occurs.

- Multiple message types (SMS, E-mail, IM)
- Location information (desktop, office, mobile)
- Availability (manually selected, automatically detected)

relevance • importance • urgency

Messaging: SMS, E-mail, IM

4. Phone system to IT system integration

To design for the future you must build a communication infrastructure, that works as an integral part of your business IT system. Your phone system must work with information available in your database and other IT systems, and it must provide information to your existing IT services. It is also vital to support multiple communication channels, platforms and class of devices and exploit the advantages they offer.

OZEKI Phone System was designed with these considerations in mind.

- Works together with your SQL database (phonebook, users, reports, etc...)
- Extends the capabilities of your CRM and ERP system
- Supports various desktop, mobile, and web based platforms

Database • CRM • ERP • Desktop • Mobile • Web

Integration: simple APIs
